

SYED ZOHAIB SAJID

COMPUTER ENGINEER

+92 328 9158924

syedzohaibsajid92@gmail.com

Rawalpindi / Islamabad

SKILLS SUMMARY

C++ | Python | JavaScript | React | Node.js | Express | PostgreSQL | REST APIs | Arduino | Microcontroller | Git & GitHub | Vercel | Claude API | HTML / CSS | MATLAB | AutoCAD | Data Analysis

EXPERTISE

- Full-Stack Web Development
- Embedded System Design
- Sensor Interfacing
- Robotics & Automation
- Circuit Design & Testing
- AI Integration (Claude API)
- Team Leadership
- Market Research & Pitching
- OOP & DSA

LANGUAGE

- English
- Urdu

TOOLS & PLATFORMS

- VS Code
- Git / GitHub
- Arduino IDE
- Proteus Simulator
- LabVIEW
- MATLAB
- AutoCAD
- Ubuntu / Linux

INTERESTS

- Website & App Development
- Building Projects
- AI / ML
- Robotics

PROFESSIONAL OVERVIEW

Computer Engineering student at NUTECH who builds products end to end: web applications with databases and AI features, and embedded devices with sensors and microcontrollers. Led the full-stack build of PAK Hardware Store, a live online hardware marketplace for Pakistan, and two student teams. Strong background in circuit design, sensor interfacing and system testing.

PROJECTS

PAK Hardware Store (Double-H Marketplace) | Team Lead

Full-Stack Web | AI Integration | Live on Vercel

- Led a team to build a live online marketplace for hardware, tools and electricals in Pakistan, with customer, vendor and admin sides.
- Built "Find by Photo": the customer uploads a picture and the Claude API recommends matching catalog products (38 of 40 test photos correct).
- Stack: React, Node.js, Express, PostgreSQL (Neon), deployed on Vercel. Added a customer service assistant and support tickets.
- Completed market research (TAM/SAM/SOM, B2B and B2C) and prepared a competition pitch deck.

Digital Voting Machine

Embedded System | Digital Electronics

- Designed and implemented a microcontroller-based voting system.
- Ensured accurate input/output handling through circuit testing and debugging.

Speed Detection System

Sensor Interfacing | Real-Time Measurement

- Developed an infrared-based speed detection system that lights a red LED when the speed limit is exceeded.
- Ensured signal accuracy through calibration and testing.

Obstacle Detection Car (ICAT)

Robotics | Real-Time Obstacle Avoidance

- Programmed autonomous navigation on Arduino using an ultrasonic sensor on a servo.
- Collaborated on circuit design and system testing.

Bank Account Class

Programming | Encapsulation | File Handling

- Built a Bank Account management system using core C++ OOP concepts with encapsulation and abstraction.

LEADERSHIP & EXPERIENCE

Business Department Representative Sigma Evolution

Team Lead Double-H Marketplace (PAK Hardware Store)

Team Lead Smart Recommendation System

EDUCATION

NATIONAL UNIVERSITY OF TECHNOLOGY

Bachelor of Computer Engineering | Ongoing (6 Semesters Done)

MILITARY COLLEGE JHELUM

FSC (ICS) | 2022

MILITARY COLLEGE JHELUM

Matriculation (Science) | 2020
